Attributes DMI

Experience

A history of more than 25 years of success is the result of a model based on respect to the client, long term relationship and commitment with delivery.

Innovation

We keep a permanent research process to either products, structure methodologies and project management, as well as to supplier base and market releases.

Involvement

We understand technology is a means, not the aim, that each market and company has its own particularities. That is why our service model is oriented to know our client's business characteristics and therefore draw a solution which is a perfect match to their technology needs.

Attributes

- **Practices aligned with sustainability concepts.**
- **Experience, maturity and consistency.**
- **Vision of the company as a whole, integrated with specialized knowledge in a series of IT and Telecom infrastructure areas.**
- **Constant innovation in products and project methodologies.**
- **Involvement and commitment with clients' businesses.**
- **Integrated and wide portfolio.**
- **Advanced level of partnership and certification.**
- **Structured in processes: ensures control and budget execution deadlines**
- **Ability to deliver IT and Telecom infrastructures to clients.**

Sustainability is more than recycling and preserving the environment.

For us, the concept of sustainability must permeate comprehensively all issues which involve the company. Its actions and reactions are triggered by everything we plan and execute. Our Sustainability Program tries to constantly integrate environmental, human and business aspects.

Human Aspects

Respect to people and continuous development of behavioral practices as well as our team's technical enhancement.

Business Aspects

The projects we develop are focused on our clients' development and operational viability, through a technological infrastructure which allows them to grow consistently and generate market value.

Environmental Aspects Green IT

By adopting environmental criteria, either in relation to suppliers (in product specification and technologies) or in project procedures and installations, we consider variables such as reduction in energy consumption, discard and destination of disposable materials.
